

Hilton Garden Inn Silverstone

Scaling Who Gets to Build

About Hilton

Global scale shapes how we make change repeatable.

9,600+	1.4M+
Hotels	Rooms
144	270M+
Countries and territories	Hilton Honors Members

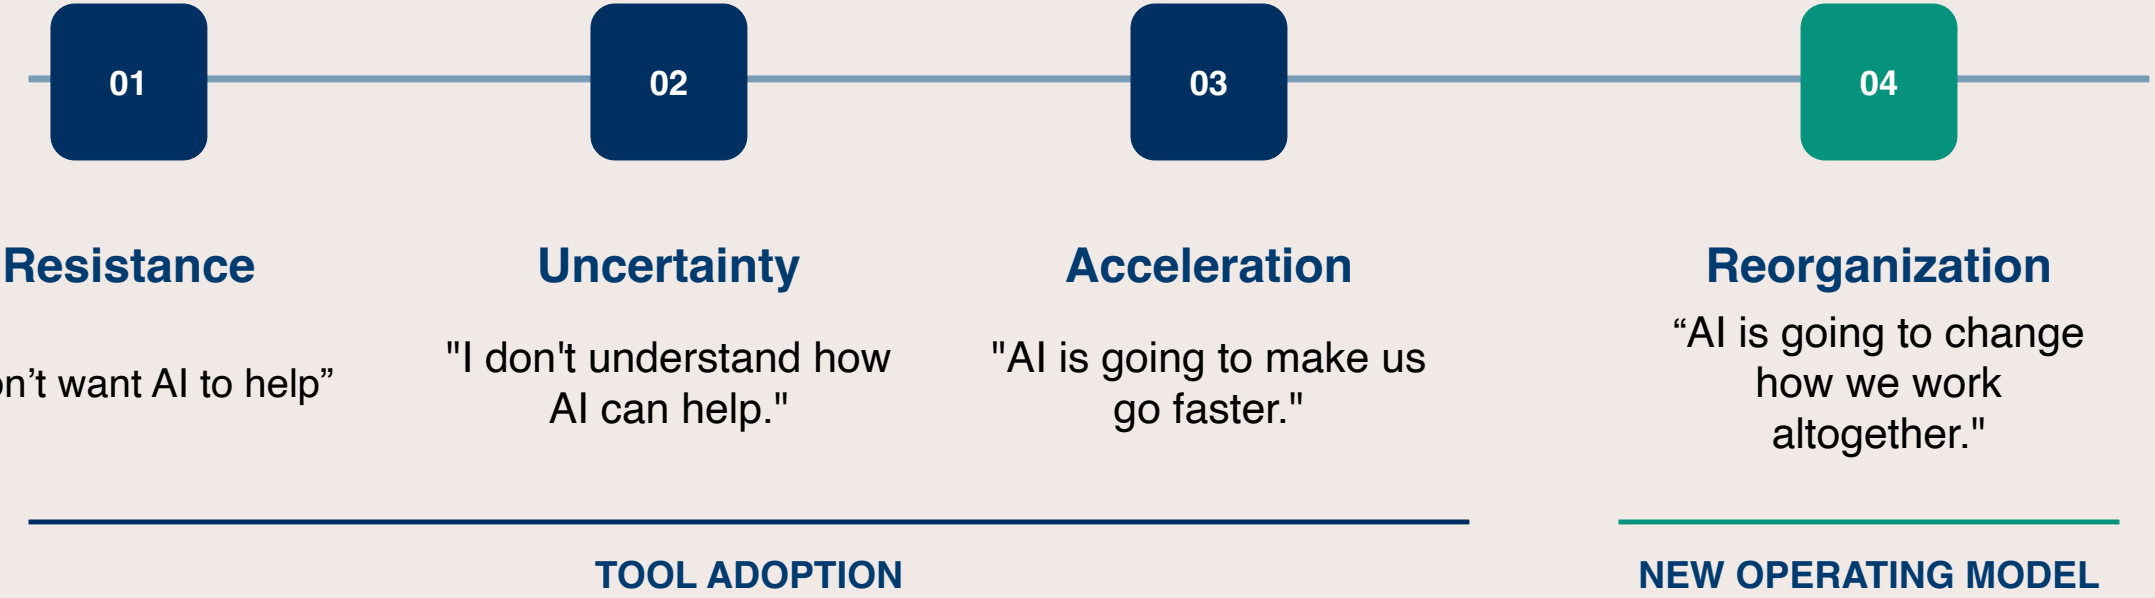

*All data accurate as of September 30, 2026

What we wondered as we left ETLS

What if normal conversation becomes how software is developed?

How would that change how work begins and who can direct it?

Four AI mindsets

EAIS Oct/Nov 2026

What we are working towards now

- Developers that drive work across all our digital platforms.
- Non-developers directly delivering to production, not just prototyping.
- Developers building the system to make other developers and non-developers successful at building safely and with high quality.

Initial results

MOBILE DEVELOPERS

100% **contributing across both iOS and Android**

Baseline: <7% prior to 2026

+25% **more value stream teams**

For 2027 vs. 2026

2026 NON-DEVELOPER PARTICIPATION

27 **submitted code changes for developer review**

3 **released changes to production**

Bringing developers and non-developers together

01 Workshops

02 Workspaces

03 Scaled learnings

04 Approachable tools

RESHAPING THE OPERATING MODEL

BALANCING SIMPLICITY + QUALITY

Workshops

17 workshops

265 participants

15+ disciplines

3 continents

What workshops provided

ACCESS

Tools & environments

Direct access to development tools, working environments, and support.

STRUCTURE

A safe way to begin

A bounded setting to test real problems, learn by doing, and get help.

PERMISSION

Authority to act

Permission to begin before every detail was fully specified.

An empowered team that lessened hand-offs

PROTOTYPE

Clickable app concepts

ITERATE

Daily changes to guest prototypes

EXPLORE

Research possibilities before committing team effort

ADVANCE

Move a prototype toward production with pattern and validation support

What a workspace contains

AGENTIC SYSTEM

Shared agents, skills, and domain specific context

Available through GitHub Copilot, Cursor, Codex, and supported tools.

LINKED CODE

Git submodules

Connect the workspace to the relevant code

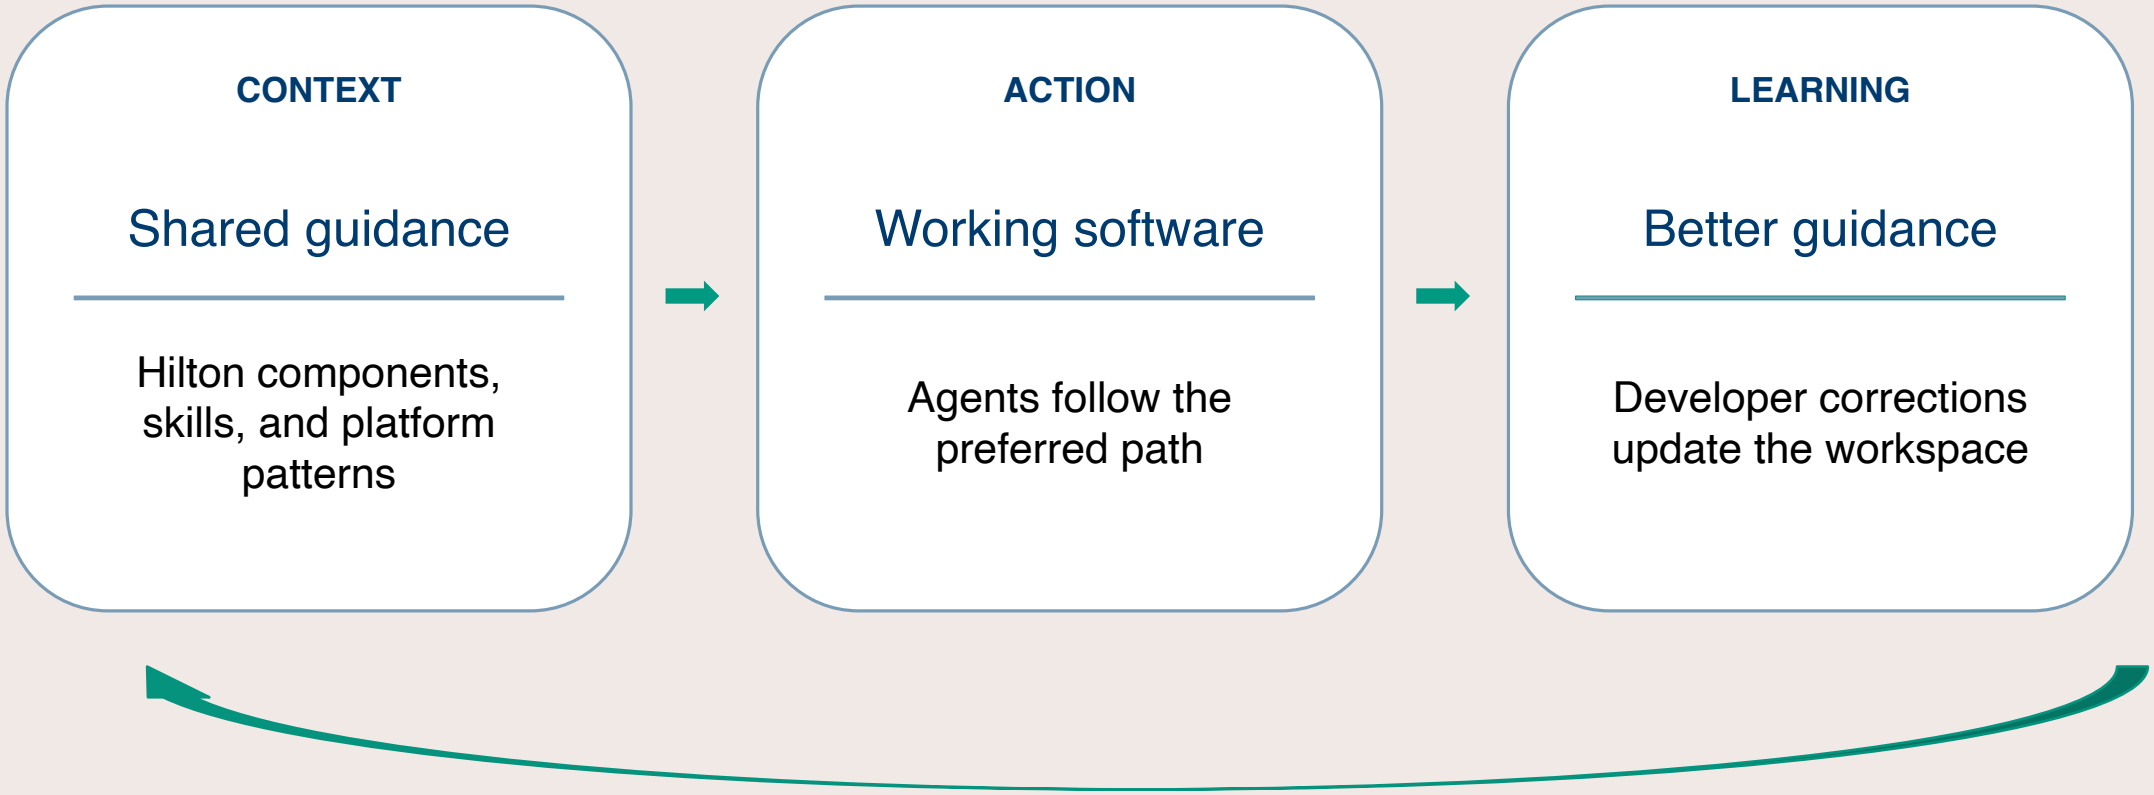

WORKING ARTIFACTS

Requirements, prototypes, designs, and test cases

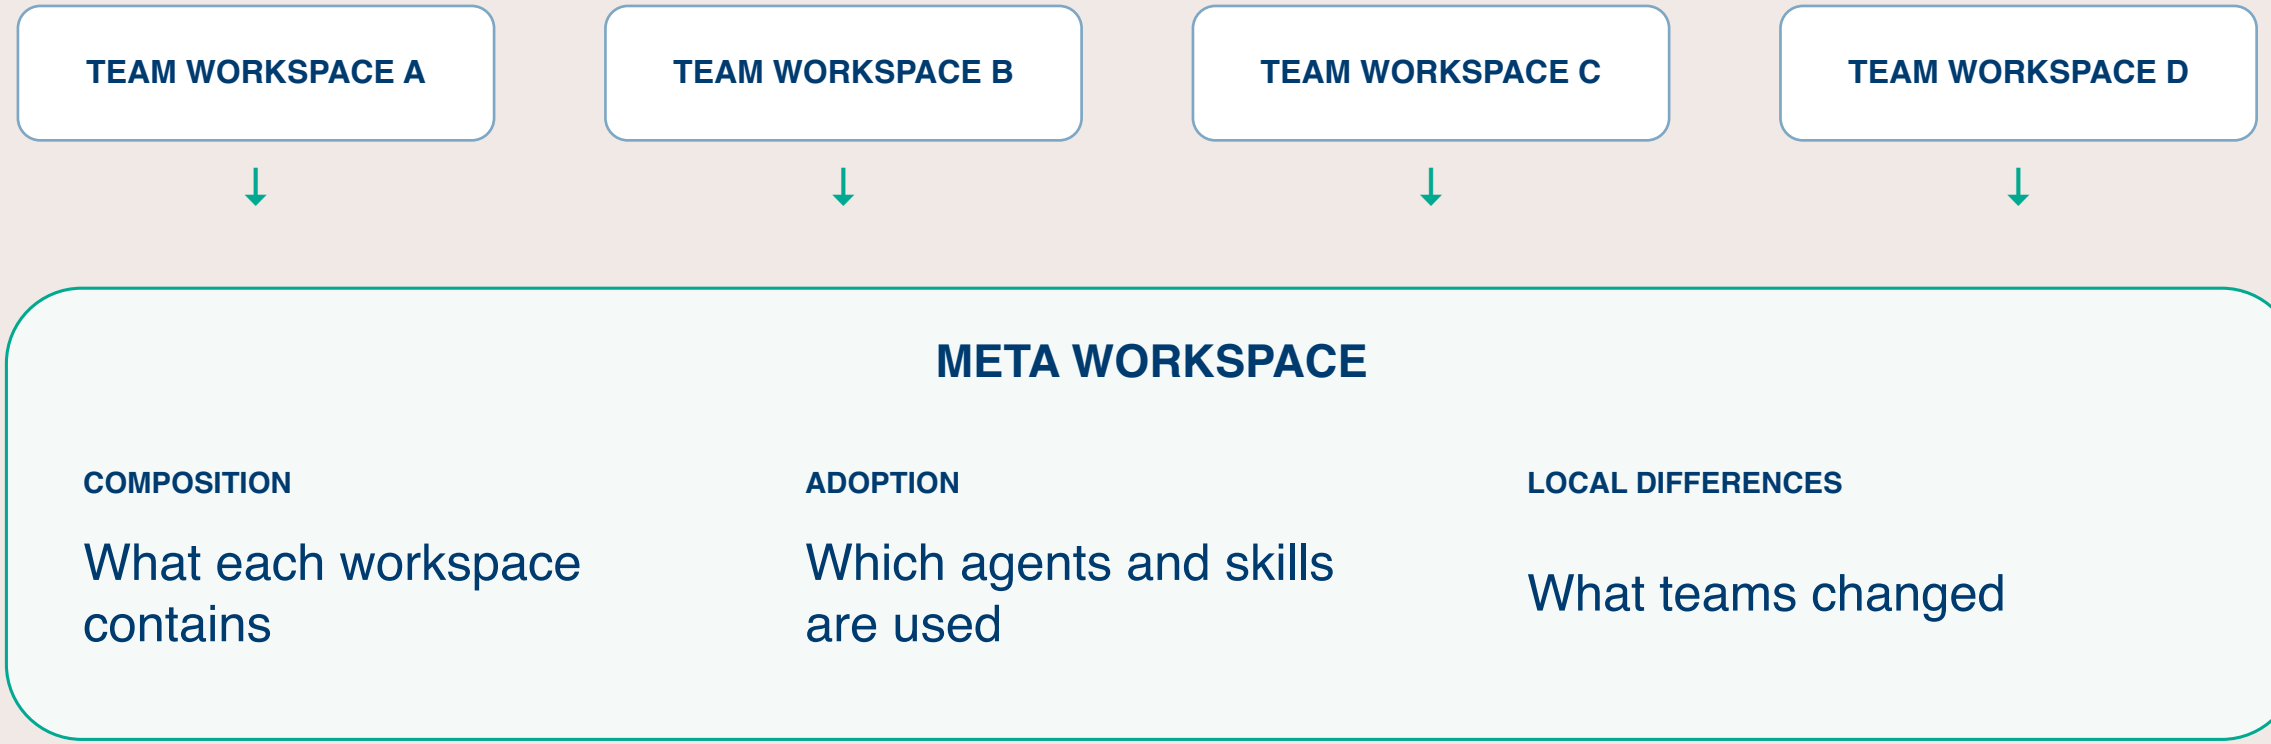

Project definitions stay with the work instead of being reconstructed from external systems.

WORKSPACE = DOMAIN SPECIFIC SHARED SOURCE OF TRUTH FOR PEOPLE + AGENTS

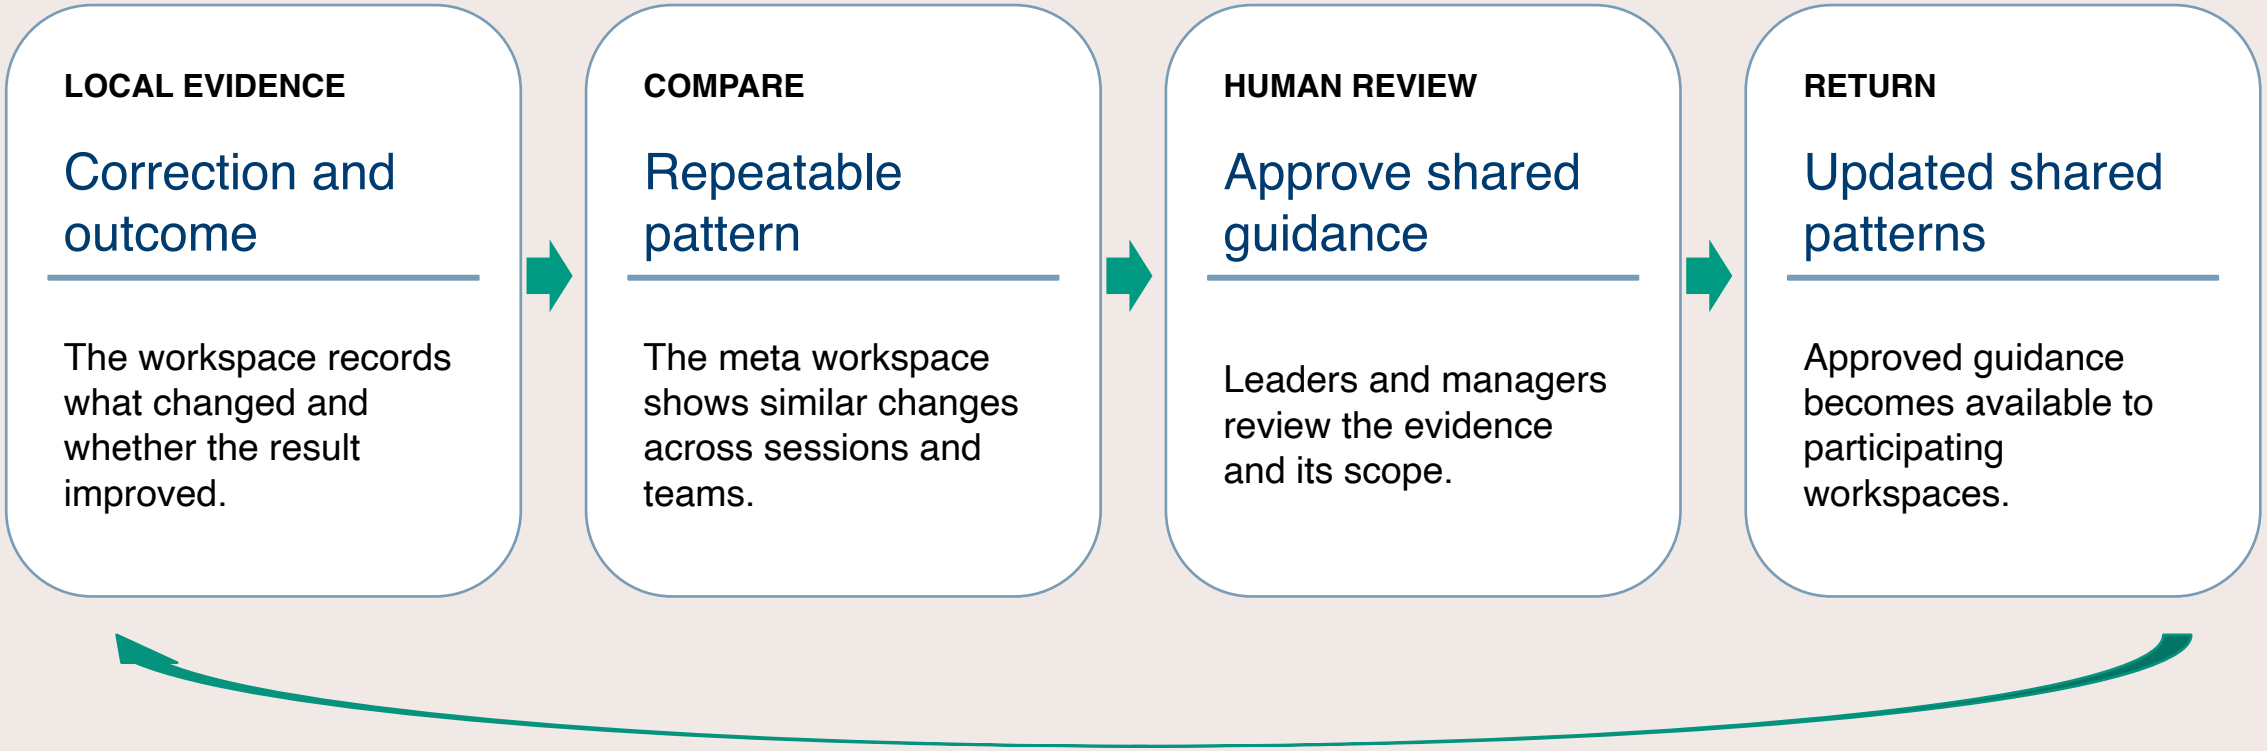

How the workspace creates a feedback loop

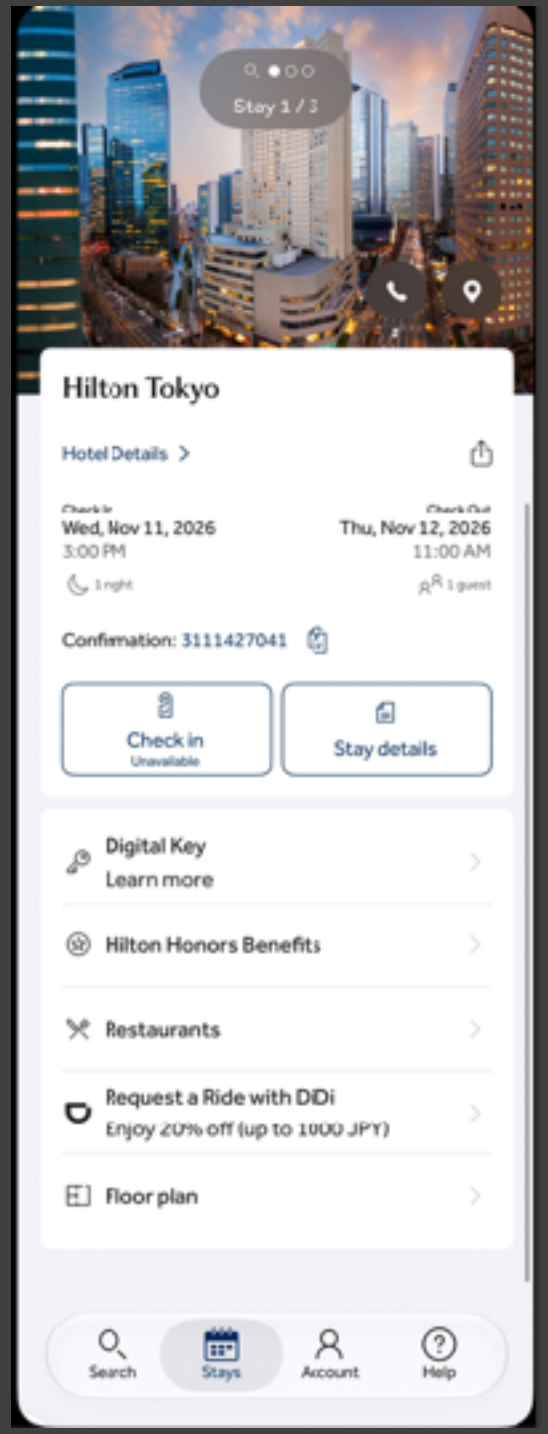

Scaling across teams: a workspace of workspaces

How learning circulates between workspaces

Shipping what

may not have shipped before

Request a Ride with DiDi
Enjoy 20% off (up to 1000 JPY)

APAC team moved from request to production

Regional team drove a feature to production. With developers enabling, not doing.

CUSTOMER NEED

Request a ride in-app

Request a DiDi ride from the Hilton app in Japan

PATH TO DELIVERY

Business participant

Drove the implementation and answered product questions.

AI helper

Drafted code, tests, and delivery records.

Developer + release teams

Reviewed the output and retained merge and release approval.

RESULT

Live in production

The participant drove the outcome; engineering controls stayed intact.

Our operating model for broader contribution

BEFORE

Business request

↓

Requirements

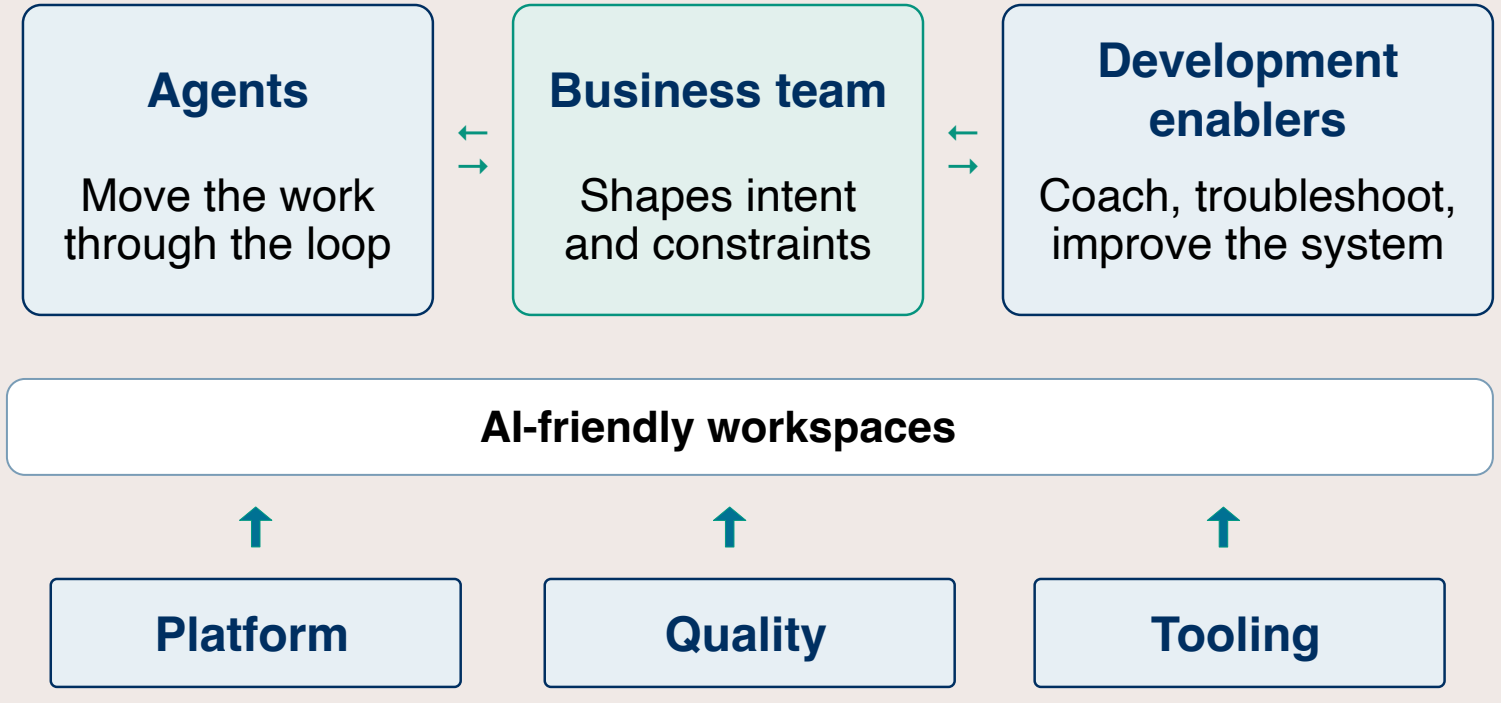

↓

Delivery team

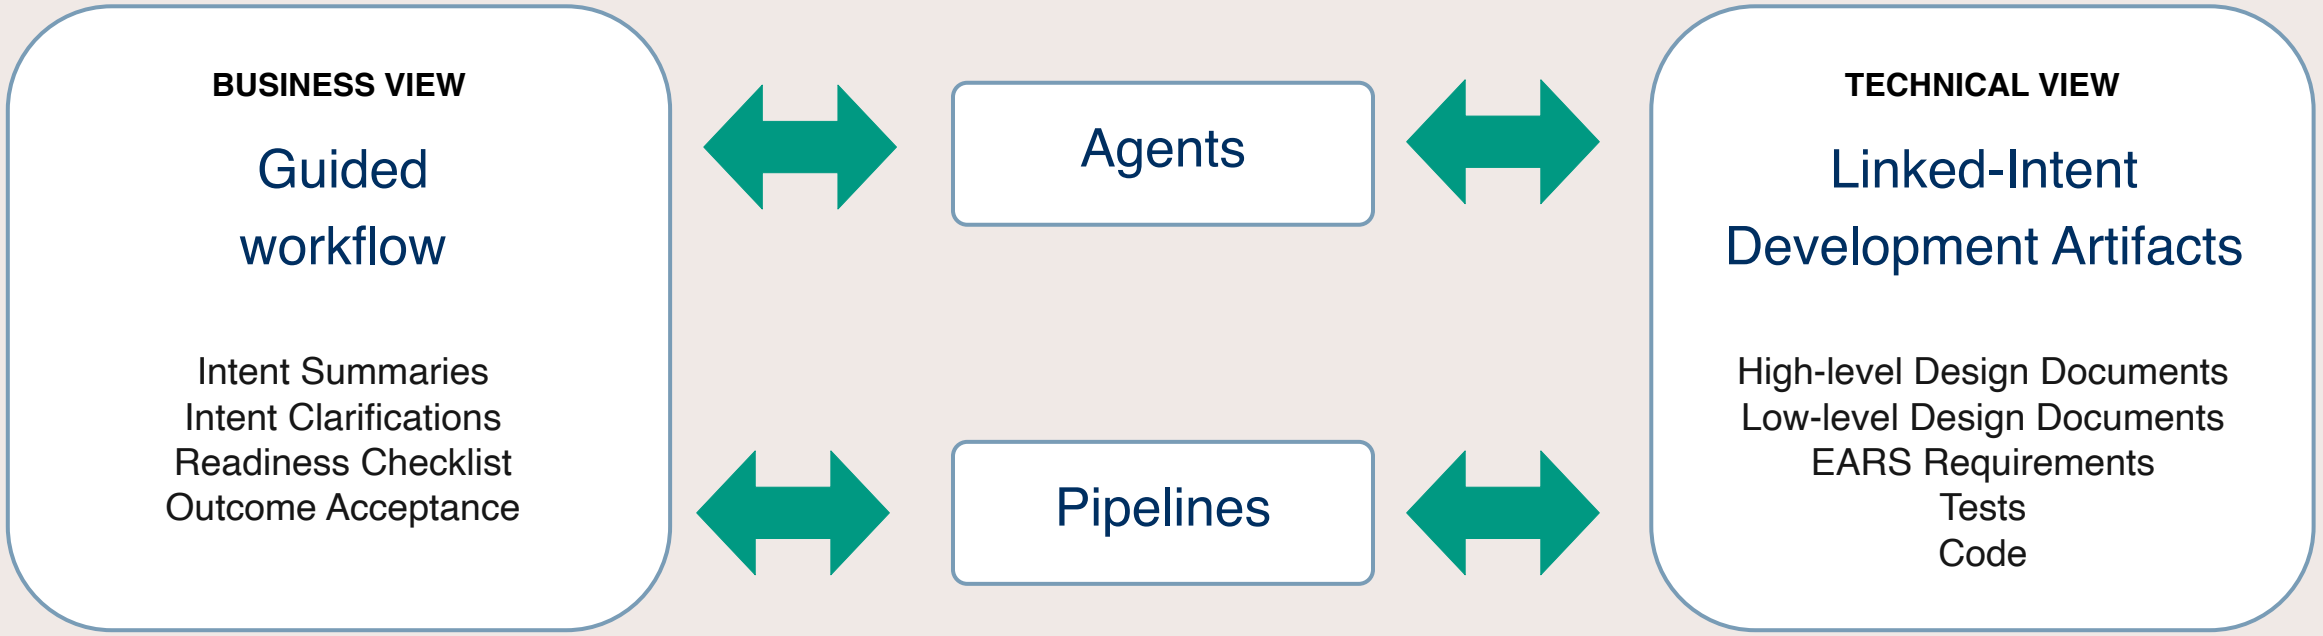

↓

Evidence

AFTER

Preparing for broader, safer, contribution

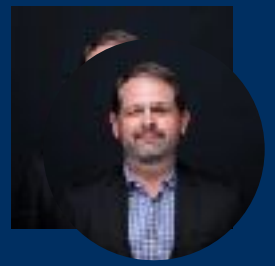

Workspaces

Repeatable patterns bridge intent and enterprise quality software by guiding work in a team's domain

Where we're looking for help

- Are you exploring structured requirements and formal methods to raise the bar on AI produced software?
- How are you opening platforms to contributors who have not been developers?
- How are you preparing teams for less specialization?
